ABSTRACTED-PUB-NO: JP 05318481A

## BASIC-ABSTRACT:

Desired amt. of pellets which absorb moisture is stored in the pellet tank. By opening a valve the pellets are dropped from the pellet tank into the drying vessel through joint and dried. The dried pellets in the drying vessel connected to the pellet tank are transferred to plastic moulding machine using the castors attached to the drying vessel and the pellet tank respectively.

ADVANTAGE - Arranges the drying vessel below the synthetic resin pellet tank to dry synthetic resin pellets efficiently before moulding.
